## Differentiators

- Patented Design
- Easy to Attach
- Attaches to any pouch
- Gives user total control
- Latex Free

## Product Summary

The Osto-EZ-Vent<sup>®</sup> is the only air venting device and will work on any manufacturers' pouch. Whether you're a Colostomate or Ileostomate, have a one-piece, two-piece, drainable, or closed end pouch, the OEV<sup>™</sup> provides easy, quick access for a better alternative to burping or opening the bottom with less mess, less bother and more security.

The Osto-EZ-Vent<sup>®</sup> was specifically designed without a filter to quickly release air buildup on demand. This ability aids in reducing pouch explosions and loose wafers. Because it is not a filtering device, the Osto-EZ-Vent<sup>®</sup> works efficiently, lasts as long as the pouch, does not become ineffective in water, and is easy to install and use.

## Company Summary

KEM Enterprises, Inc. is a woman-owned small business and product development company based in the Greater Grand Rapids, Michigan area. Since 1996 KEM has manufactured the Osto-EZ-Vent<sup>®</sup> locally with entirely USA made parts, which allows the company to effectively monitor the OEV<sup>™</sup> production and keep standards high.
