## Product description

A single-use oral swab consisting of an untreated, absorbent tip mounted on plastic or paper stick. The device is intended to moisten and cleanse the patient’s oral cavity to support mouth hygiene and comfort. It is commonly used on intensive care and long-term care patients to administer moisture, mouthwash, or medications to improve the physical condition of the oral cavity and possibly help reduce the incidence of patient infection. The device is typically applied by nursing staff in hospitals and care institutions, or by caregivers in homecare settings.

## Intended use

Oral Swabs is intended to moisten and clean a patient’s oral cavity to maintain normal mouth patency and hygiene. The device is non-sterile and disposable.

# Product Specifications

## Classification

Medical Device Class 1

## Features

- Single-use
- Hygienic
- Secure head attachment
- Soft foam

## Sterilization

Not applicable. These products are provided non-sterile.

## Storage conditions

Store in a dry and cool area, away from heat and direct sunlight.

## Shelf life

3 years
